

Numéro erreur	Raison	Message
0.1		"Identifier already declared"
0.2		"Undeclared type identifier"
1.3	Opération partielle env_types()	"Undeclared identifier"
	Condition	"Expected class identifier"
	Opération partielle +	"Class or type is already declared"
2.3	Condition / Opération partielle env_types()	"Internal error"
	Opération partielle +	"An attribute name is redeclared by a method name"
2.4		"Attribute name already declared"
2.5	Condition type != void	"Void type cannot be declared as an attribute type"
	Condition identificateur parent doit être un attribut	"Identifier already declared in super class must be an attribut"
2.7	Condition signature	"Method prototype must be same as herited"
	Condition type de retour	"Return type must be a subtype of hertied method return"
2.9		"Void parameter is not allowed"
3.5		"class named 'class' must be declared"
3.17	Opération partielle +	"Undeclared identifier"
	Condition type	"Void cannot be the type of a variable"
3.24		"Return type cannot be void"
3.28		"Types are not compatible"
3.29		"Expression type must be boolean"
3.31		"Impossible to print this type of element"
3.33		"Binary operation is only allowed for int or float types"
3.39		"The origin type cannot be cast into the destination type"
3.40		"InstanceOf works only with two class types operands"
3.42		"Cannot instantiate a class, the type must a class"
3.43		"'This' does not exist"
3.51		"Modulo operation is only allowed for int type"
3.56 / 3.57		"Equals or not equals comparison is only with int, float, class, null or boolean types"
3.58...3.61		"This comparison works only with int or float types"
3.62		"Minus operation is only allowed for int or float types"
3.63		"Not operation is only allowed for boolean type"
3.65		"Undefined class"
3.66	Condition class existe	"Undefined class"
	Condition subtype 1	"A class is not a subtype of an other class"
	Condition subtype 2	"?"
3.71		"Undefined class"
Conversion int -> float		"An int can be cast in float only"
